UNDERNEATH IT ALL

Intelligence built in, with people in control.

We rebuilt the foundation instead of bolting AI on top. Each role will have its own agent, and every agent works the same way.

You decide.
The agent recommends. You approve, change or reject.

It shows its work.
See what it looked at, the rule it followed and what it ruled out.

It keeps the record.
Every decision is logged, with who approved, changed or rejected it.

We test it.
Every version takes an exam before it ships.
